Consortium/LLNL at: http://image.llnl.gov Series: IRAL Plate: 18 Row: f Column: 1
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 4758689
This clone has the following problem: frame shifted.

Consortium/LLNL at: http://image.llnl.gov Serles: IRAK Plate: 62 Row: 1 Column: 15
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, GenomeScan gene prediction
This clone has the following problem: frame shifted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens, Similar to KIAA0076 gene product, clone IMAGE:5240443, mRNA.                                                            with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling roots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California. Riverside (Choi, Close, Fencon). Phagemids were plated and placed at the Clemson University Genomics Institute (CUGI)

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
